

HTML 5 – New Tags

<meter>

- It is used to define a scalar measurement within known range.
- This is also known as gauge.
- Ex: Disk usage, Marks achieved etc.
- **Note:** The <meter> tag should not be used to indicate progress (as in a progress bar). For progress bars, use the <progress> tag.
- The <meter> tag is supported in all major browsers, except Internet Explorer and Safari.

<progress>

- It is used to display progress of a task.
- Ex: Uploading progress etc.
- The <progress> tag is currently supported in Firefox, Opera, and Chrome.

<figure> and <figcaption>

- It is used to show a caption for an image.
- The <figure> tag is supported in Internet Explorer 9, Firefox, Opera, Chrome, and Safari.

<details> and <summary>

- It is used to show collapsible information.
- The <details> tag is currently only supported in Chrome.
